

To go beyond the standard

Best Practice takes huge pride in dedicating the prestigious and highly sought after 'Company of the Year' feature to AMECaL. This is presented to the company that has shown the most enthusiasm and commitment to delivering a variety of unique services to all of their customers.

AMECaL was established in 1998 and since then has become one

of the industry's most recognised calibration companies. David Heppell said, "We offer a truly unique and world-leading range of calibration services and this is why we are where we are."

Since the company started over a decade ago, it has become a leading authority in a variety of techniques in the calibration industry and has a wealth of experience and knowledge that marks

it as a centre of excellence. Its technicians are extremely committed to improving standard procedures and continuing their pioneering work in specialised areas such as Gloss Measurement. AMECaL are the only calibration company in the UK to have UKAS Accreditation in this particular area of expertise. Unique in its field, AMECaL is at the forefront of the industry.

David said, "We are constantly striving to supply our customers with a service of the highest quality, accuracy and precision, exceeding their expectations and our competitor's offerings in the process and this supports our belief that we are the best in our sector."

Following several years of continuous research, planning and development, the Newcastle-upon-Tyne based company are set to shake up the industry by unleashing their own range of innovative professional instrumentation. "It was time to take the next step by releasing a range of electrical and environmental test and measurement equipment in which we felt confident. We are applying the technical knowledge built up over many years to provide excellent quality products to our customers.

"Extending the service and supplying a complete package of support and supply of equipment was a very natural progression for us", commented David.

UKAS Traceability for Paint Test Equipment

As the only UKAS accredited laboratory for Gloss Measurements, AMECaL also undertakes calibration for all paint testing equipment including: paint flow cups, wet film thickness gauges, electronic paint thickness gauges, Holiday detectors, Hygrometers, thermometers and many more, all UKAS traceable, under one roof.

AMECaL is also working hard to extend the already impressive range of UKAS Accredited calibration it supplies. The technical team are looking to include temperature, humidity, mass, pressure and dimensional calibration, while also introducing their range of world-class test and measurement equipment. David said, "UKAS have made several visits to our laboratories and have carried out a rigorous and extensive assessment of our processes. We have been UKAS accredited for many years for our electrical and optical work, but we are constantly looking to add even more to our impressive portfolio."

The company carries out regular research across the industry to help determine its future development. "Customers want quality instruments and on many occasions are let down by brand named products, either because of poor performance or high price." David said, "In response to this feedback, we set about putting together a range of professional quality, yet still value-for-money, equipment. Using our expertise to save them time and money is what our customers have come to expect from AMECaL."
